Non-Standard Property Insurance Specialists

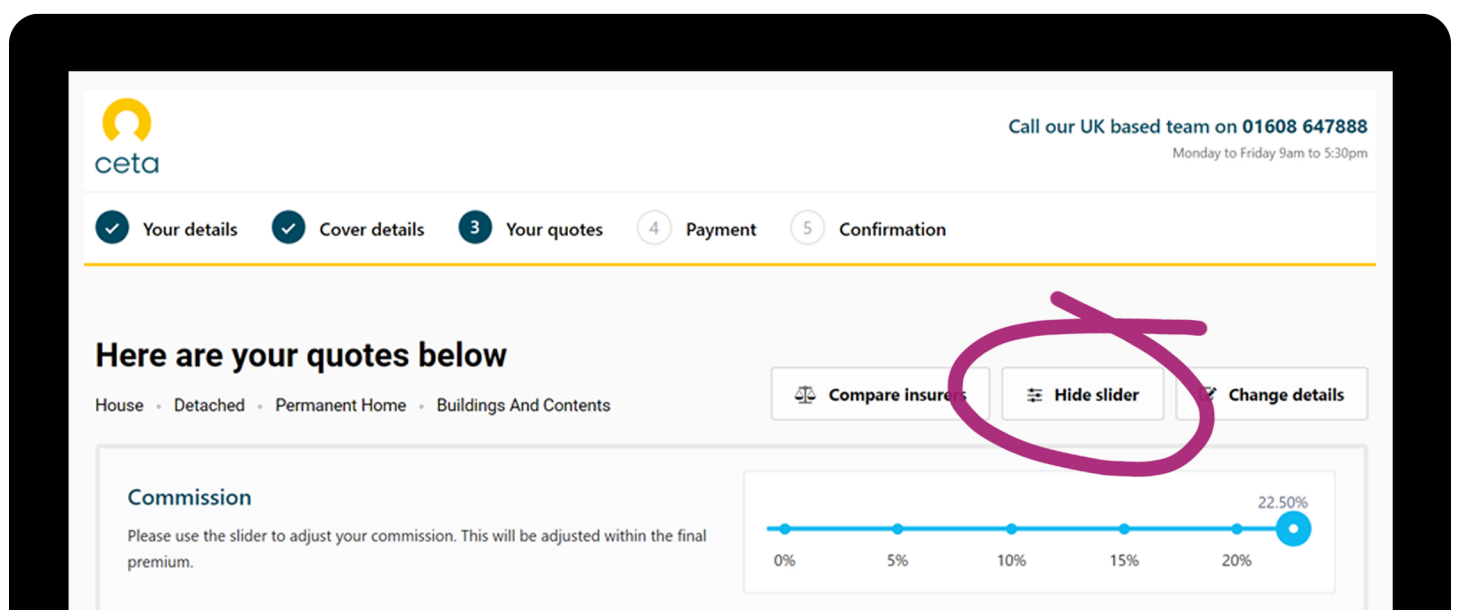

New Ceta price beater tool

Ceta have launched a new commission slider tool which will allow brokers to adjust commission rates, enabling premiums to be reduced on a case by case basis. The new tool has been in development for a while, and has been launched as a result of feedback from brokers who frequently use the system.

Using the slider is simple. We have discretely placed it on the quote page. We appreciate that you may sometimes be screensharing with a customer, or even have them sitting next to you, so we have given you the ability to show or hide the slider. By clicking the "show slider" button, the slider will appear. You can then either drag the slider down, in turn reducing the premium or, drag the slider up, increasing the premium and the commission you will get paid.

Once you are happy with commission set, you have the option to 'hide slider', but this is not imperative to being able to continue with the quotation.

Please get in touch if you have any feedback or questions using the live chat in the broker portal, email broker.support@ceta.co.uk or call **01608 647888**.

The screenshot displays the Ceta Insurance quote page. At the top left is the Ceta logo. On the top right, it says "Call our UK based team on 01608 647888" with "Monday to Friday 9am to 5:30pm" below it. A progress bar shows five steps: "Your details", "Cover details", "Your quotes" (highlighted with a blue circle and the number 3), "Payment", and "Confirmation". Below the progress bar, the heading "Here are your quotes below" is followed by a breadcrumb trail: "House > Detached > Permanent Home > Buildings And Contents". To the right of the breadcrumb are three buttons: "Compare insurance", "Hide slider" (circled in red), and "Change details". Below this is a "Commission" section with a slider. The slider is labeled "Please use the slider to adjust your commission. This will be adjusted within the final premium." and has a scale from 0% to 20% with a blue circle currently set at 22.50%.
